ligated to a DraIII adaptor [TGTTGGCCTACTGG], digested
and cloned into distinct braIII sites of the PME18S-FL3
vector (5' site CACTGTGTG, 3' site CACCATGTG). XhoI should
be used to isolate the cDNA insert. Size selection was
performed to exclude fragments A.1SAb. Library
constructed by Dr. Sumio Sugano (University of Tokyo
Institute of Medical Science). Custom primers for
sequencing: 5' end primer CTTCTGCTCTAAAAGCTGCG and 3' end
primer CGACCTGCAGCACAA." 8 others

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        DB

It currently consists of 25 contigs. Gaps between the contigs are represented as runs of N. The order of the pieces is believed to be correct as given, however the sizes of the gaps between them are based on estimates that have provided by the submittor.

Sequences 25552-255560 and 255561-25566 represent CDNA sequences encoding canine interleukin-13 (IL-13) clones 80 and 78 respectively. The invention relates to canine and 78 respectively. The invention relates to canine or feline CDL4, canine or feline CDL5 (ELIne CDD4), canine IL-5, canine IL-13, feline (IL-4, canine CDT54 (CD40 ligand), canine IL-5, canine IL-13, feline colony-stimulating factor (GMCSF), and nucleotides which encode these colony-stimulating factor (GMCSF), and nucleotides which encode these immunoregulatory proteins. The proteins, their associated nucleic acids, specific antibodies and inhibitors may be used as vaccines for therapeutic or prophylactic regulation of an immune response in animals (particularly cats, dogs, horses and humans). They may be used to treat autoimmune or infectious diseases including allergies, tumours, inflammation and graft rejection, and to increase the response from a co-administered antigen. The nucleotide sequences can also be used for the recombinant production of a protein, while nucleotide fragments are useful as probes, as amplification primers and as sources of inhibitory therapeutics (e.g., antisense oligonucleotides). The proteins may be used to raise antibodies and to screen for modulators of activity, while the antibodies may be used in detection,

Sequences 25552-25560 and 255561-25556 represent CDNA, sequences encoding canine interleukin-13 (IL-13) clones 80 and 78 respectively. The invention relates to canine and 78 respectively. The invention relates to canine and 78 respectively. The invention relates to canine conformed in the conformed in the conformed interferon-alpha (IRN-alpha) and feline granulocyte macrophage colony-stimulating factor (GMCSF), and nucleides which encode these interferon-alpha (IRN-alpha) and feline granulocyte macrophage colony-stimulating factor (GMCSF), and nucleides which encode these immunorequiatory proteins. The proteins, their associated immunorequiatory proteins. The prophylactic regulation of an immune response in animals (particularly cats, dogs, horses and humans). They may be used to treat autoimmune or infectious diseases including the response from a co-administered antigen. The nucleotide sequences can also be used for the recombinant production of a protein, while nucleotide fragments are useful as probes, as amplification primers and as sources of inhibitory therapeutics (e.g., antisense oligonucleotides). The proteins may be used to raise antibodies and to screen for modulators of activity, while the antibodies may be used in detection,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     300
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     240

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  allergies, tumours, inflammation and graft rejection, and to increase the response from a co-administered antigen. The nucleotide sequences can also be used for the recombinant production of a protein, while nucleotide fragments are useful as probes, as amplification primers and as sources of inhibitory therapeutics (e.g., antisense oligonucleotides). The proteins may be used to raise antibodies and to screen for modulators of activity, while the antibodies may be used in detection,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Sequences 255552-255560 and 255561-255566 represent cDNA sequences encoding canine interleukin-13 (IL-13) clones 80 and 78 respectively. The invention relates to canine IL-4, canine or feline Filt-13 ligand, canine or feline CD40, canine or feline CD154 (CD40 ligand), canine IL-5, canine IL-13, feline interferon-alpha (IRPN-alpha) and feline granulocyte macrophage colony-stimulating factor (GWCSF), and nucleotides which encode these immunoregulatory proteins. The proteins, their associated nucleic acids, specific antibodies and inhibitors may be used as response in animals (particularly cats, dogs, horses and humans). They may be used to treat autoimmune or infectious diseases including the colony of the co
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      185
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 245
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            gcagetetagaatetetgateaatgteteegaetgeagegeeateeaaaggaeeeagagg 305

Sequences 25552-25560 and 255561-25556 represent CDNA sequences encoding canine interleukin-13 (IL-13) clones 80 and 78 respectively. The invention relates to canine and 78 respectively. The invention relates to canine confine CDL4, canine or felline CDL5 (CD40 ligand), canine iL-5, canine IL-13, felline CDL54 (CD40 ligand), canine IL-15, canine IL-13, felline cDL54 (CD40 ligand), canine IL-5, canine IL-13, felline CDL54 (CD40 ligand), canine IL-6, canine CDL74 (CD40 ligand), canine IL-6, canine CDL74 (CD40 ligand), canine CDC colony-stimulating factor (GMCSF), and nucleotides which encode these concletc acids, specific antibodies and inhibitors may be used as uncleic acids, specific antibodies and inhibitors may be used as vaccines for therapeutic or prophylactic regulation of an immune confinement or infectious diseases including They may be used to treat autoimmune or infectious diseases including the response from a co-administered antigen. The nucleotide sequences can also be used for the recombinant production of a protein, while concletion farged in thibitory therapeutics (e.g., antisense oligonucleotides).

They proteins may be used to raise antibodies and to screen for modulators of activity, while the antibodies may be used in detection, and the control of a protein.
                                                                                                                                                                    Interleukin-13; IL-13; antibody; canine; inhibitor; immune response;
immunoregulation; tumour; cancer; autoimmune disease; vaccine; ss.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Nucleic acids encoding immunoregulatory proteins from cats or dogs, useful for treating or preventing e.g. tumors or autoimmune disease

Sequences 25552-25560 and 255561-25566 represent CDNA
sequences encoding canine interleukin-13 (IL-13) clones 80
and 78 respectively. The invention relates to canine
IL-4, canine or feline Fit-3 ligand, canine or feline CD40, canine or
feline CD154 (CD40 ligand), canine IL-13, feline
IL-4, canine or feline Fit-3 ligand, canine IL-13, feline
colony-stimulating factor (GMCSF), and nucleotides which encode these
colony-stimulating factor (GMCSF), and inhibitors may be used as
vaccines for therapeutic or prophylactic regulation of an immune
response in animals (particularly cats, dogs, horses and humans).
They may be used to treat autoimmune or infectious diseases including
allergies, tumnors, inflammation and graft rejection, and to increase
the response from a co-administered antigen. The nucleotide sequences
can also be used for the recombinant production of a protein, while
nucleotide fragments are useful as probes, as amplification primers and
as sources of inhibitory therapeutics (e.g., antisense oligonucleotides).
The proteins may be used to raise antibodies and to screen for
modulators of activity, while the antibodies may be used in detection,
response;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Nucleic acids encoding immunoregulatory proteins from cats or dogs, useful for treating or preventing e.g. tumors or autoimmune disease
                                                                                                                                                                                                                                                                                                                                                           Interleukin-13; IL-13; antibody; canine; inhibitor; immune resp

Sequences 25552-25550 and 25551-25566 represent cDNA sequences encoding canine interleukin-13 (IL-13) clones 80 and 78 respectively. The invention relates to canine LL-4, canine or feline Flt-13 ligand, canine or feline CD14 (CD40 ligand), canine IL-5, canine IL-13, feline interferon alpha (IFN alpha) and feline granulocyte macrophage colony-stimulating factor (GMCSF), and nucleotides which encode these immunoregulatory proteins. The proteins, their associated nucleic acids, specific antibodies and inhibitors may be used as

             response in animals (particularly cats, dogs, horses and humans).

They may be used to treat autoimmune or infectious diseases including allergies, tumours, inflammation and graft rejection, and to increase the response from a co-administered antigen. The nuclectide sequences can also be used for the recombinant production of a protein, while nucleotide fragments are useful as probes, as amplification primers and as sources of inhibitory therapeutics (e.g., antisense oligonucleotides). The proteins may be used to raise antibodies and to screen for modulators of activity, while the antibodies may be used in detection,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         57 atggcgctctggttgactgtggtcattgctctcacctgcctcggtggccttgcctcccg 116

Sequences 25552-255560 and 255561-255566 represent cDNA
sequences encoding canine interleukin-13 (IL-13) clones 80
and 78 respectively. The invention relates to canine
IL-4, canine or feline Fil-3 ligand, canine or feline CD00, canine or
IL-4, canine or feline Fil-3 ligand, canine IL-13, feline
IL-4, canine or feline Fil-3 ligand, canine IL-13, feline
interferon-alpha (FN-3lpha) and feline granulocyte macrophage
colony-stimulating factor (GMCSF), and nucleotides which encode these
immunoregulatory proteins. The proteins, their associated
colony-stimulating factor (DMCSF), and inhibitors may be used as
colony-stimulating factor (DMCSF), and inhibitors may be used as
conclete acids, specific antibodies and inhibitors may be used to treat autoimmune or infectious diseases including
concletions from a co-administered antiped. The nucleotide sequences
con also be used for the recombinant production of a protein, while
nucleotide fragments are useful as probes, as amplification primers and
as sources of inhibitory therapeutics (e.g., antisense oligonucleotides).
The proteins may be used to raise antibodies and to screen for
concletion primary and detection, and concletion and primary and as sources of activity, while the antibodies may be used in detection,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           176
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           413
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Gaps
                                                                                           Nucleic acids encoding immunoregulatory proteins from cats or dogs, useful for treating or preventing e.g. tumors or autoimmune disease.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                allergies, tumours, inflammation and graft rejection, and to increase the response from a co-administered antigen. The nucleotide sequences can also be used for the recombinant production of a protein, while nucleotide fragments are useful as probes, as amplification primers and as sources of inhibitory therapeutics (e.g., antisense oilgonucleotides). The proteins may be used to raise antibodies and to screen for modulators of activity, while the antibodies may be used in detection,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            sequences encoding canine interleukin-13 (IL-13) clones 80 and 78 respectively. The invention relates to canine and 78 respectively. The invention relates to canine LL-4, canine or feline Flt-3 ligand, canine or feline CD4, canine interferent alpha (IFN-alpha) and feline granulocyte macrophage (colony-stimulating factor (GMCSF), and nucleotides which encode these immunoregulatory proteins. The proteins, their associated nucleic acids, specific antibodies and inhibitors may be used as vaccines for therapeutic or prophylactic regulation of an immune response in animals (particularly cats, dogs, horses and humans). They may be used to treat autoimmune or infectious diseases including
                                                                                 Canine interleukin-13 (IL-13) clone 80 cDNA coding region complement
                                                                                                                                                                      Interleukin-13; IL-13; antibody; canine; inhibitor; immune response;

The present invention describes low adenosine (A) content antisense oligonucleotides and compositions (I) comprising them. In the antisense oligonucleotides the A is replaced by a 'Universal' or alternative base. (I) can have respiratory, bronchoolidator, antiinflammatory, analgest, immunosuppressive, antiasthmatic, hypotensive and cytostatic activities. The antisense oligonucleotides and (I) can be used to down-regulate the expression and or activity of target polypeptides associated with lung/respiratory disorders and malignancies, such as stimulating and activating peptide factors and transmitters, transcription factors, immunoglobulins and antibodies, antibody receptors, cytokines and chemokines, endogenously produced specific and non-specific enzymes, binding proteins, adhesion molecules and their receptors, cytokine and
                                                                                                                  Low adenosine (A) content antisense oligonucleotides which do not trigger adenosine receptors during metabolism, useful e.g. for treating
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  chemokine receptors, adenosine receptors, bradykinin receptors, central nervous system (CNS) and peripheral nervous and non-nervous system receptors, CNS and peripheral nervous and non-nervous system transmitters, defensins, growth factors, vasoactive peptides and
                                                                                                                                                                                                                                                                                                                                                                   Disclosure; Page 1336; 1592pp; English.

the inflammation. The ON can have antiinflammatory, antiallergic, antialization of an analgasic activities. The compositions are useful for the treatment of diseases associated with inflammation, impaired alrways, including lung disease and diseases whose secondary effects afflict the lungs of a subject. They can be used for treating e.g. ischaemic conditions, pulmonary vasconstriction, allergies, asthma, impeded respiration, respiratory distress syndrome, pain, cystic fibrosis, pulmonary hypertension, emphysema, chronic obstructive pulmonary disease (COPD), and cancers such as leukaemias, lymphomas, carcinomas, and cancers which may metastasise to the lungs, including breast and prostate cancer. The reduction of the adenosine content of the release of deoxyadenosine which activates adenosine content of the release of deoxyadenosine which activates adenosine receptors causing bronchoconstriction and inflammation, A32313 to A35312 represent the nucleotide sequences given in the sequence listing from the present throwtion, which correspond to SEQ ID NO:1 to 2815, and then the last 185 sequences are also called SEQ ID NO:1 to 185, but the sequences differ from the previously named sequences. SEQ ID NO:11 to 1680 (A32323 to A33992) are specifically claimed ONs from the present invention. N.B. Sequences given in the disclosure of the present invention do not match up with their corresponding SEQ ID NO: sequences given in the nucleic acids involved in bronchoconstriction, allergies, and/or Sequence 1270 BP; 288 A; 335 C; 336 G; 311 T; 0 other; sedneuce

conjugation the state of the state of the state of alternative base.

(I) can have respiratory, bronhodilator, antiliflammatory, analgesic, immunosuppressive, antiasthmatic, hypotensive and cytostatic activities. The antisense oligonacleotides and (I) can be used to down-regulate the expression and or activity of terget polypeptides associated with ung/respiratory disorders and malignancies, such as stimulating and activating peptide factors and transmitters, transcription factors, immunoglobulins and antibodies, antibody receptors, cytokines and chemokines, endogenously produced specific and non-specific enzymes, binding proteins, adenosine molecules and their receptors, cytokine and chemokine receptors, adenosine molecules and their receptors, central nervous system (CNS) and peripheral nervous and non-nervous system peptide transmitters, defensine, growth factors, vasociated proteins. The creceptors, binding proteins and malignancy associated proteins. The antisense oligonucleotides may be used in this way to treat disorders and confirming respiratory obstruction (especially pulmonary obstruction and/or bronchoconstriction) and/or lung inflammation, allergy (ies) and/or surfactant hypoproduction which are associated with a disease or condition selected from pulmonary vasoconstriction, inflammation, allergies, pain, cystic fibrosis (CF), allergies syndrome (RDS), pain, cystic city contains contains and contains contai
                                                                                                                                                                                                                                                                                                                                                                                            oligonucleotides and compositions (I) comprising them. In the antisense oligonucleotides the A is replaced by a 'Universal' or alternative base.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             fragments
